

For the scenario below identify the **entities**, their **attributes** and **appropriate keys**

The Angel Warehouse

The Angel Warehouse stores items for its parent company. The warehouse is organised into **bays**, which are storage areas, but the items themselves are stored in **bins**. Each bay contains a number of bins. Each bay is identified by a **unique bay number** and the **bay location** and **the height** of the bay are recorded. Each **bin has a different number** within the bay, always starting with bin no. 1, and while some bays have only 5 bins some have over 50. **The size** of each bin is recorded.

Some bays have a **parking spot** for one fork lift to help move items round the warehouse and lift items into bins. Each **fork lift** is allocated to a bay. Each fork lift has a **unique equipment number** and the **maximum carrying weight** of the fork lift needs to be known. Some fork lifts are petrol driven while some are **electric**.

For all bins the **maximum loaded weight** must be known.

When an **item** is taken into the warehouse it is assigned a **unique number** and the **date is recorded** as well as the **item weight**. Bins can store a number of items and when an item is put in a particular **bin this date** is also recorded. Items can be moved back and forth between bays and bins to optimise the warehouse storage.
